Date: April 26, 2007
Subject: Information Letter –TTC-IL-DHC03-03
To: Super Otter Owner/ Operators

Otter Owners:

As many of you are aware we are offering a Parallel Series Start System to incorporate into your converted Otters. Some of you have already purchased this last year. We have since discovered a need for an additional relay and switch for this system. This additional relay and switch increases the safety margin and also gives the benefit of allowing the operator the option to start the aircraft in the Parallel or the Parallel/ Series Start mode. In the event of one weak battery this switch can be selected to straight Parallel and still allow the engine to start. This modification kit will be provided at no charge until July 1, 2007. After such date there will be a nominal charge for this kit.

For those customers that have not converted to the Parallel Series Start System, the Service Kit TTC-SK-DHC3-01 is \$2,500.00 USD.

Please let us know if you have any questions.

Thank you,
